Build contextual Decision Intelligence (DI) into your business

BETTER TOGETHER

Accenture and Quantexa help customers with transformational and evolutionary solutions

Partnership Overview

The Accenture and Quantexa alliance partnership enables us to work with clients to build contextual Decision Intelligence (DI) into their business. By leveraging this new generation of decision intelligence, operational teams can make faster, more accurate decisions. Together we help customers experience a single view of data that is enriched with vital intelligence about the network relationships between people, organizations, and places. This brings big benefits – more data, higher accuracy, better analytics, stronger connections, more automation, renewed trust better tools, and more accurate answers!

Connect data wherever it is, regardless of quality with **Entity Resolution**

Create a dynamic view of the bigger picture with **Network Generation**

Craft analytic models based on real-world expertise with our **Analytics Framework**

Our solutions enable organizations with:

Real-time processing

Smart data preparation & analytics enrichment

Real-time query

Predictive scoring

Machine learning

Insights discovery

Better Together

The face of data is changing with many new and existing challenges. Accenture's knowledge of the ever-changing regulatory environment, combined with Quantexa's DI platform, gives you an ever-evolving view of your customer. This is why Accenture and Quantexa are well-equipped to help customers with their transformational and evolutionary solutions – especially across the Financial Services, Insurance, and Telco industries with solutions for perpeptual Know Your Customer (pKYC), Anti Money Laundering (AML), Credit Risk, Managed Data Management (MDM), Fraud and Transaction Monitoring (TM).

Challenges today	Desired Future State
Multiple representations of the same client across the group - some linking between records exists but often lacks the holistic view of connected parties	Global, centralized view of wholesale clients and connected parties for use across the group
Cross line of business connections are difficult to track and manage, particularly when it comes to connections across retail and corporate	Authoritative source for wholesale related parties which can also be leveraged across retail and business
Many different hierarchical views of clients managed by different departments (sales, credit, legal) in disparate systems	Consistent client hierarchy backbone that is easily consumable and flexible to support different departments and use cases
Multiple sources of external data used across the organization, with inconsistent connection to client data	All external data consolidated in single location with automated connection to internal data and process to manage updates (e.g. to reflect M&A)
Product data managed by separate businesses with different taxonomies making it difficult to obtain holistic view of client product utilization	Holistic view of all products held by each client across the group

We achieve this by coming together and utilizing new technologies that simplify the development of industry-focused business applications that take advantage of data to solve business problems. And by leveraging multi-dimensional and complex hierarchical data, we include social and commercial graphs that underline digital business use cases that are optimized with contextual intelligence to drive faster, more accurate decisions.

More data

Higher accuracy

More analytics

Stronger connections

More automation

Renewed trust

About Quantexa

Quantexa is a global data and analytics software company that helps organizations make more informed operational decisions through meaningful data. Quantexa's Decision Intelligence platform uses the latest big tech and AI to power contextual Decision Intelligence; a new approach that uncovers hidden risks and reveals new opportunities by providing a holistic, connected view of internal and external data, all in one place. These insights help companies solve major challenges across data management, KYC, customer intelligence, financial crime, risk, fraud, and security throughout the customer lifecycle.
